Description:

Seeking a position to utilize my skills and abilities in an organization that offers professional growth while being resourceful, innovative and flexible. I thrive in an environment with steep Learning curve.

Projects

Taylor & Francis Group.™ 12 2020 – 11 2021

Senior MuleSoft Developer Bangalore, India

- Acted as a Senior developer and mentor, closely monitors and leads a team of 4 people.
- Being part of sprint planning and assigning story points to each API assigned to my team.
- Participating in requirements gathering sessions passively with the designers team and getting the required info.
- Assigning sub tasks to developers and helping them when needed.
- Develop the API's – process API's and system APIs based on the requirement.
- Implement M units for the developed flows. Cover both DW functions and also mule processors as part of coverage.
- Design and develop common, reusable libraries, logging framework and error-handler frameworks.
- Reviewing the code developed by the team and also submitting my code to review to my designer.
- Assign code review patch work or defects from previous sprints to self and work accordingly.
- End-to-End testing on CI environment and also performs smoke-test before deploying to SIT.
- Monthly once or twice Deployments using Jenkins depending on the number of API's to be deployed.

Languages: Mule Server 4.3, Travis CI, RAML, Rest API, Java, Maven, Mule ESB, M Unit, Salesforce.

Developer Tools: VS Code, Any point Studio, Any point Platform, Technologies/Frameworks: Postman, Source Tree
