CHENNAI

PROJECT HANDLED

WilcoICS - Integrated Customer service focuses on utilizing customer data to enhance service delivery, improve product quality, and drive sales. It integrates technology with human interaction to create personalized, efficient solutions for customers. The project emphasizes understanding customer preferences, co-creating value with customers, and adapting to their unique needs. By leveraging tools for data collection, analysis, and security, WilcoICS ensures seamless collaboration across customer service teams, delivering a consistent and outstanding experience. The initiative also supports decision-making through data-driven insights and ethical data management practices.

Tech Used: HTML, CSS, JS, C#, Asp.Net core

MVC Tools: VS 2017, 2019

Project Management: JIRA

Version control: GIT, Github (Cloud based)

ROLES AND RESPONSIBILITIES

- Design, create and maintain applications using the .NET platform and environment.
- Collaborating with different teams to understand user needs and translate them into technical specifications, focusing on the specific requirements of the fintech industry.
- Write code using .NET technologies, such as C# and ASP.NET, to implement the CRM system.
- Develop features and functionalities according to the requirements by Client.
- Create and maintain the database structure for storing customer data and related information.
- Implementing data validation and error-handling processes in ASP.NET to guarantee the accuracy and reliability of customer data and maintain the system's integrity.
- Utilize technologies SQL Server for database development
