SUMMARY

I am a seasoned Software Developer with expertise in Nodejs and React.js and have a decent knowledge in AWS cloud services. Boasting 2.6 years of hands-on experience. Presently I lead the CMS and IMS Project within my current organization, leveraging my skills to drive its success. Throughout my career, I have actively contributed to 5 projects, honing my abilities and delivering impactful solutions.

PROFESSIONAL EXPERIENCE

Appstec ERP Solution PVT LTD Feb 2022 - Aug 2024

Software Engineer

- Proper understanding of requirements and break down into **small structures**. Maintain proper documentation of **software architecture** and code. **Code Review**.
- Experience in Node.js, React.js, and AWS. Skilled in JavaScript, HTML, and CSS, with a focus on back-end development using Node.js, dynamic front-end interfaces with React.js, and cloud services with AWS.

PROJECTS

1.ERP Procurement Solutions. 2.PMS (Property Management System) 3.CMS (Contract Management System) 4.IMS (Issue Management System) 5.HRMS

TOP PROJECTS

ERP (Procurement Solutions) :- The application facilitates the entire procurement process, including creating purchase requests, evaluating supplier bids, negotiating contracts, and managing orders. **Technologies** : React.js, NodeJS , SQL Server, Redis, AWS DevOps, etc.

Responsibilities:

- Server-side logic, API development, security (authentication/authorization), performance optimization, third-party integrations.
- Implementing reusable component.
- To create HOCs which Extract the duplicate state logics and validations logic for control.
- Maintain project and file structure.
- Deployment.

PMS (Property Management System) :- The Property Management System (PMS) application is designed to streamline and simplify the management of real estate properties by enabling users to track, organize, and manage property-related details such as listings, tenant information, lease agreements, maintenance requests, and financial records.

Technologies : React.js, NodeJS , MongoDB, Redis, AWS DevOps, etc.

Responsibilities:

- Server-side logic, API development, security (authentication/authorization), performance optimization, third-party integrations.
- Implementing reusable component.
- To create HOCs which Extract the duplicate state logics and validations logic for control.
- Maintain project and file structure.
- Deployment.

ACHIEVEMENTS & AWARDS

Awarded for successfully delivering an ERP Procurement Solutions project, enhancing procurement efficiency, reducing cycle times, and achieving cost savings within budget and timeline
