Summary

A highly skilled and motivated MuleSoft developer with 2.5 years of experience in designing, developing, and implementing integration solutions using MuleSoft. Strong expertise in API-led connectivity, CloudHub, Anypoint Studio, and MuleSoft's suite of products. Proven ability to work collaboratively with cross-functional teams to deliver high-quality integration solutions.

Experience

Capgemini

MuleSoft Developer - Bengaluru, Karnataka

09/2021 - Present

- Designing and developing RAML-based APIs using Anypoint Platform.
- Used several connectors like HTTP, Database and WSC.
- Experience in mule migration from mule 3.8.x to 4.3.x.
- Build APIs using API-led connectivity and complex mule flows, scopes, error-handling strategies, validation, encryption using secure property placeholder and transformations in Mule 4.3.
- Implementation of Munits for each endpoint developed with more than 80% code coverage.
- Peer-to-peer code review of developed APIs.
- CI/CD with Azure DevOps suite of tools from creating User stories on Azure boards up to deploying the applications on RTFs.
- Reviewed and resolved the assigned SIT and UAT defects.
- Participated in agile development methodologies and Scrum ceremonies.
- Worked collaboratively with cross-functional teams to ensure the integration solutions met the business requirements.

Capgemini

MuleSoft Managed Services - Dubai

10/2023 - 12/2023

- Monitor Production logs in Splunk and fix issues based on alerts raised.
 - Create Anypoint Custom Dashboards and Alerts.
 - Monitor Production and DR servers to check on CPU and memory using basic Kubernetes commands.
 - Generate RTF and Appliance reports to provide MuleSoft support for any server issues.
-
