03/2016 - 03/2017

Percentage : 89.14%

PERSONAL PROJECTS

Ride Share (2024)

- Car pooling web application using mern stack.
- created a carpooling app using React.js, Node.js and Express.js for eco-friendly ride sharing.
- Implemented user authentication, ride booking, real-time chat, and a rating system.
- Ensured reliability and performance through rigorous testing

Sociopedia (2023)

- A Facebook-like Social Media Platform Clone.
- Sociopedia successfully replicates key features of a social media platform, focusing on user interaction and engagement.
- Technologies Used:
 - Frontend: HTML, CSS, JavaScript
 - Backend: Python (Django/Flask)
 - Database: MSQl

End - to - End Encryption (2022)

- The End-to-End Encryption (E2EE) project is designed to provide a robust and secure communication platform for users who require confidentiality in their conversations.
- The project focuses on implementing E2EE to protect the data throughout its transmission journey, ensuring that only the sender and receiver can decrypt and read the messages.
- Technologies Used: Python, Tkinter & Urllib
- Python: For the core functionality and encryption algorithms.
- Tkinter: To provide a user-friendly graphical interface for secure messaging.
- urllib: To handle URL interactions and ensure secure data transmission over the internet
