InboxX ~ The mail app

April'23 – May,23

Key Skills: Express NodeJS MongoDB ReactJs MaterialUI SMTP

- Composing and Sending Emails: Enabled users to compose and send emails to other recipients. Implemented features like drafts and rich text formatting.
- Sent and Drafts Folders: Provided folders to store sent emails and drafts. Sent emails are saved automatically into the database, while drafts are saved for later editing and sending.
- Security and Privacy: Ensured the application follows best practices for security and privacy. Implemented measures like secure connections (HTTPS),
- Responsive Design: Developed a responsive user interface that adapts to different screen sizes and devices, providing a consistent experience on desktops, tablets, and mobile devices.

Employee Register

Oct '22 – Nov '22

Key Skills: Express NodeJS React Nodemon MongoDB

- Employee Registration: Allowed administrators to register new employees by capturing their personal information such as name, email, phone number, address, and position within the company.
- Employee Listing and deletion : Displayed a list of all registered employees, including their basic information, in a tabular format.
- Employee Update: Provided a form or interface to update employee information. Administrators should be able to modify details such as name, email, phone number, address, position, or any other editable fields.
- Error Handling: Implemented proper error handling and validation to ensure data integrity and prevent application crashes.
