PROJECTS

SavorSpot - Food Ordering Web App

- Developed **SavorSpot**, a food ordering web application, utilizing **Swiggy public APIs** for live food data.
- Integrated **React Router DOM** for seamless navigation and employed **React JS** for an engaging user interface.
- Utilized **Tailwind CSS** for captivating styling and implemented key features including a **Shimmer UI** and powerful **search functionality**.
- Designed to be **fully responsive**, ensuring optimal user experience across various devices.

Movix - TMDB Movie Database Project

- Built Movix website using **React** and **TMDB API**.
- Designed homepage, movie details, and search functionality.
- Fetches movie data (**ratings, release dates, synopses**) from **TMDB API**.
- Enables browsing and searching of movies.
- Responsive design for various devices.
- Focused on **UX** and intuitive navigation.

Weather App

- Developed a user-friendly **weather application** utilizing **HTML, CSS, JavaScript, and Node.js**.
- Utilized the **OpenWeather API** to fetch real-time weather data, displaying temperature, wind speed, and weather forecasts for user-specified locations.
- Designed an **intuitive user interface** for seamless weather information access across various devices.
