Software Developer with more than 5 years of experience in designing and implementing innovative software solutions. Possess great interpersonal and analytical skills, excelling in application development. Adept at leading development teams and collaborating with cross-functional stakeholders to deliver high-quality products.

PROFESSIONAL EXPERIENCE

NTT Data Services (Formerly APISERO), Mulesoft Developer

Digital Engineering Senior Engineer

Mumbai, IN

April 2021–Present

- Part of the Migration project for **Compass**, which was migrating mule 3 to mule 4 applications. Developed the apps and Munits with a minimum of **80%** code coverage. Successfully tested and deployed the apps in Production with no or minimal bugs.
- Ensured comprehensive documentation (**High Level** and **Low Level** Document) that gives a clear understanding of the system architecture and implementation details.
- Led the Migration project for StrathCona County successfully, which was development of mule 4 applications and migrating the apps from **On-premise** setup to **Cloudhub**.
- Tasked with overseeing **Code Review** and **Refactoring** Client's code for Fleetcor-Lodging. Also developed Munits and seamlessly integrated them into the CICD pipeline, enhancing efficiency of testing and deployment procedures.
- Developed **Event-based** architecture syncing with the Timetabler system using **Messaging Queue** (Anypoint MQ), including Process and System APIs with MUnit Testing. Also designed an effective error-handling mechanism and refactored client's API for enhanced functionality.
- Developed Mule 4 applications for **WEIR Group Ip Limited**, which facilitated synchronization of Kinaxis Rapid Response data across environments. Also developed **Scheduler based** applications which would sync **Workday** and **SAP Concur** System. Additionally provided Knowledge transfer to the client development team.
- Executing the Migration of Dell Boomi to Mulesoft applications for Abbvie. Implemented a robust retry mechanism for technical errors in **KAFKA**.
- Developed wrapper service applications, enabling internal Salesforce applications to consume client's MAMDM database efficiently.

Larsen And Toubro Infotech, Java FullStack Developer

Software Engineer

Pune, IN

August 2019–April 2021

- Developed Functionalities and Modules for Policy Renewal Application which was designed to autonomously assess multiple parameters, enabling users to renew policies seamlessly. The system offers the flexibility for both automated and manual renewal processes, enhancing user convenience and efficiency in policy management.
- Orchestrated the migration of AngularJS applications into “as-is” **Angular 8** applications, preserving the existing functionality while transitioning into the latest framework.
- Designed reusable Angular components that were used across the project implementation fostering **efficiency** and **consistency** across application.
- Proficiently resolved defects within diverse applications ensuring optimal functionality.

- Demonstrated commitment to knowledge sharing by conducting Knowledge Transfer Sessions for new project team members.

EDUCATION

Vidyalankar Institute of Technology
Bachelor of Computer Engineering

Mumbai, IN
May 2019

TECHNICAL SKILLS

Areas of expertise: Backend, Integrations, Frontend

Languages: Java, Typescript, SQL, Angular 8, Spring , REST API, Mulesoft, HTML, CSS, Dataweave 2.0, RAML

Frameworks and tools: Spring Boot, Git, SVN, SourceTree, Maven, Github Desktop, Jenkins.

Databases: MySQL, Oracle, MSSQL.

Certifications: Java BrainBench, Mulesoft Certified Developer L1 (2X), Mulesoft Integration Associate
