## Profile Summary

- Proficient in SQL development, including writing efficient queries, stored procedures, and performance optimization for scalable database solutions.
- Strong knowledge of database design and data manipulation techniques to ensure effective data storage and retrieval.
- Knowledge in Git and GitHub for version control and code collaboration, ensuring seamless management of database scripts.
- Knowledge in using Jira for task management, sprint planning, and tracking project progress.
- Competent in tools such as Putty, WinSCP, and VNC Server for efficient remote operations and system management.
- Detail-oriented and dedicated to delivering high-quality, optimized database solutions with a focus on system efficiency and integrity.

## Experience

### SoftGrid Info Pvt Ltd | SQL Developer

Jan 2024 – Till Date

- **SQL Development:** Developed efficient SQL queries, stored procedures, and functions to support business requirements and improve database operations.
- **Data Handling:** Performed basic data updates and inserted records into tables as per project requirements.
- **Query Optimization:** Assisted in identifying minor query improvements to enhance performance.
- **Task Automation:** Scheduled simple database tasks using basic automation tools.
- **Collaboration:** Supported development teams by resolving basic database-related queries.
- **Database Maintenance:** Monitored basic database health and ensured routine checks for data accuracy.

## Skills

- **SQL Development Tools:** Proficient in SQL Server and T-SQL, including creating queries, stored procedures, and functions to support business operations.
- **Database Management:** Hands-on experience with database operations on Linux environments, ensuring efficient data handling.
- **Version Control:** Knowledgeable in Git and GitHub for version control and collaboration on database scripts.
- **Task Management:** Familiar with Jira for tracking development tasks, managing sprints, and maintaining project transparency.
- **Utilities and Platforms:** Skilled in using Putty, WinSCP, and VNC Server for remote system management and database operations.
- **Task Automation:** Experience in basic automation for database processes and performance monitoring.

## Projects

### Stock Management Project

Jan 2024 – Till date

- **Database and Inventory Management:** Developed a structured database in SQL Server to manage employee details and inventory records, implementing CRUD operations for efficient data handling and reporting.
- **Database Optimization:** Created views for data presentation, designed functions for reusable logic, and implemented indexes to optimize query performance.

### Database Migration Project

Jan 2024 – Till date

- **Bulk Data Loading:** Utilized SQL scripts to efficiently load large volumes of data from flat files (CSV, TXT) into SQL Server databases, incorporating validation and transformation processes.
- **Database Migration and Schema Remapping:** Performed database migrations using backup and restore strategies and applied schema remapping techniques to restructure database objects, ensuring seamless integration and minimal downtime.

## Education
